

The background features a close-up of a human hand, with the fingers slightly curled. Overlaid on the hand is a grid of small, glowing orange dots. The dots are arranged in a pattern that follows the contours of the hand, creating a sense of depth and texture. The overall color palette is a warm, monochromatic orange.

Epigraph /
Sharp Waves:
2022

Overview

44 Epigraph articles were published in 2022; this includes Sharp Waves episodes/transcripts as well as translations

The aim was to translate all articles into Spanish and French with assistance from the College of Translators

Sharp Waves episodes were hosted on Buzzsprout and available on Spotify, Apple Podcasts, Google Podcasts, Amazon Music, iHeart Radio, and several other directories

Sharp Waves episodes featuring a journal article from Epilepsia, Epilepsia Open, or Epileptic Disorders were embedded within the journal article

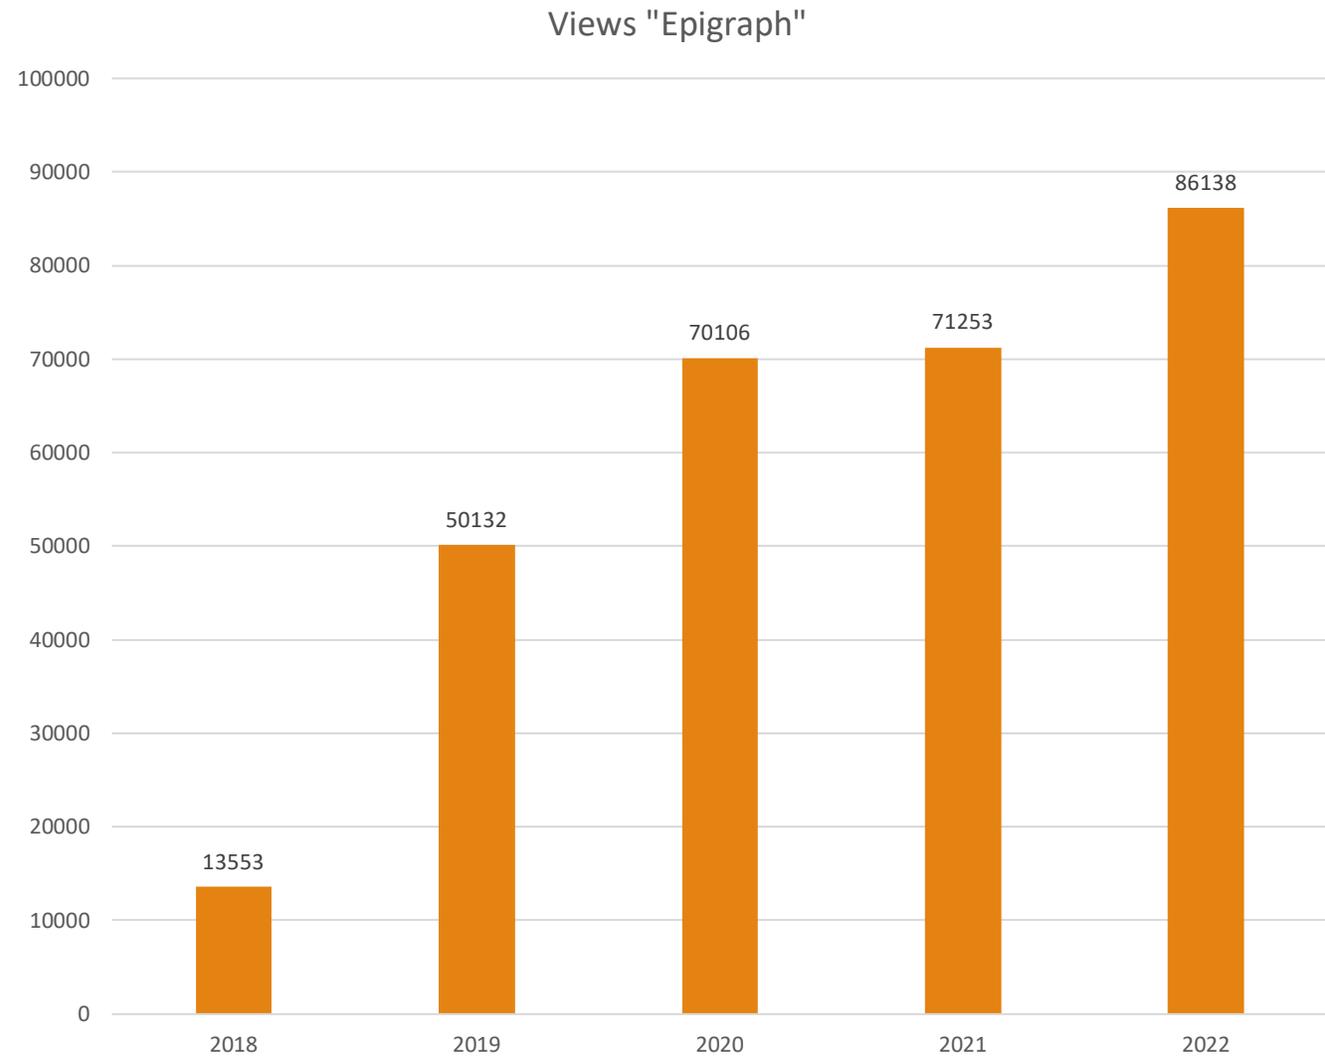

ILAE website

Epigraph page views

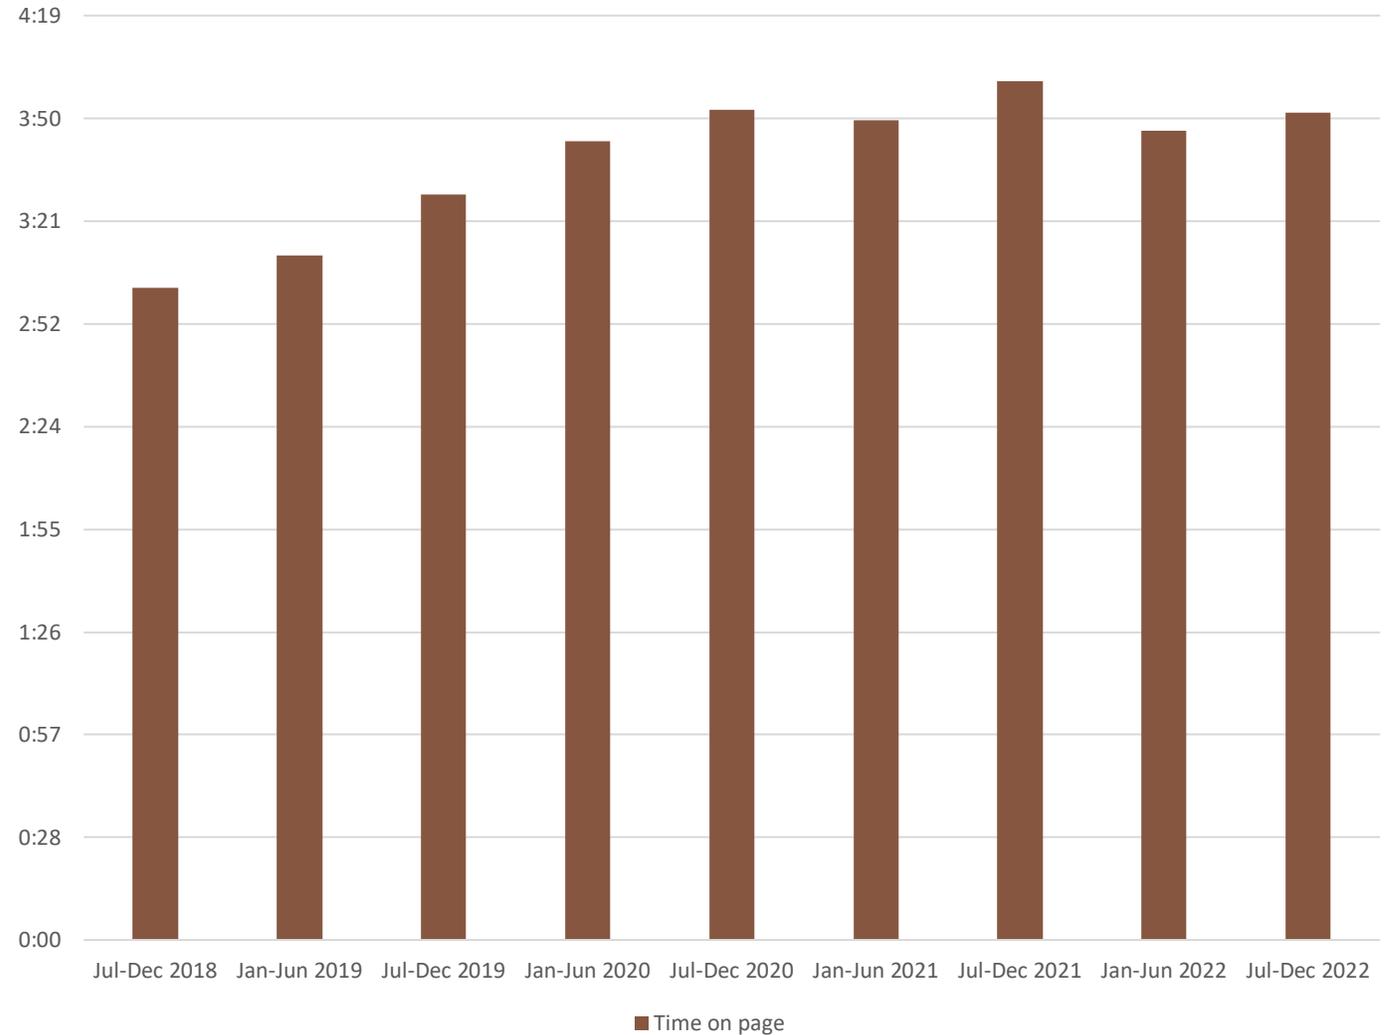

In 2022, page visits increased 21% over 2021. Visits have increased each year since Epigraph was re-envisioned.

Time on page

Viewers spent an average of 3 minutes 50 seconds on Epigraph pages in 2022, indicating they are reading articles and not merely visiting pages and abandoning them.

Significance

High SE and epilepsy rates in the Canadian Arctic are consistent with LMIC rather than HIC. Our findings demonstrate the paradox of LMIC-equivalent epilepsy populations camouflaged within HIC. Our findings also highlight the long-standing plight of these under-served and overlooked populations hidden in plain sight.

PODCAST

Key Points

- Patients with uncontrollable seizures in Kivalliq, Nunavut, Canada, are evacuated by air to a single site over 1200-1900 km.

Sharp Waves episodes that discuss journal articles from *Epilepsia*, *Epilepsia Open*, or *Epileptic Disorders* are embedded in the journal article (the example at left is from <https://onlinelibrary.wiley.com/doi/full/10.1002/eipi4.12538>)
