

# NEW EEG tool to improve EEG reading

The International League Against Epilepsy -Eastern Mediterranean Region (ILAE-EMR) proudly introduces a new EEG tool to improve EEG reading for young EMR neurologists /physicians that enlists the help of international EEG experts within the EMR and elsewhere with the objective of improving the interpretation of EEG recordings and, ultimately, the management of patients with epilepsy and other neurological disorders in our region.

This easy-to-use website removes the geographic barriers between neurologists and EEG experts in the EMR.

**Take advantage of the EMR EEG interface!** See information on how to use the new EEG tool, how to find EEG reference centers, an EEG expert web directory, and epilepsy news and events. **The patient's clinical data and the EEG to be examined can be sent to the EEG expert in a secure manner!**
