

## 34<sup>th</sup> Annual

### J. Allyn Taylor International Prize in Medicine

#### *Fundamental and Translational Research in Epilepsy*

---

As Chair of the Selection Committee for the J. Allyn Taylor International Prize in Medicine, made possible through the generosity of the C.H. Stiller Foundation, I am soliciting nominations for the 2018 J. Allyn Taylor International Prize in Medicine.

J. Allyn Taylor, founding Chair of the Board of Robarts Research Institute, was a widely respected Canadian business leader, and a person who, throughout his lifetime, demonstrated a deep regard and passionate involvement in health care matters in Canada. Each year the Taylor Prize recognizes the work of a remarkable scientist in a selected field.

The 2018 Taylor Prize will be granted to a scientist who has made outstanding contributions in the area of *Fundamental and Translational Research in Epilepsy*. The recipient of the prize will receive \$25,000 and a classical medallion bearing the likeness of J. Allyn Taylor. As you can see from the attached list, the award has been presented to many outstanding scientists over the years.

I would value your help in selecting this year's outstanding scientist in the field of *Fundamental and Translational Research in Epilepsy*. Nominations should be sent directly to me in electronic format, with a short summary of the nominee's contributions along with a current curriculum vitae. The closing date for nominations is May 1, 2018.

Yours sincerely,

Dr. Marlys L. Koschinsky  
Chair, Taylor Prize Selection Committee  
The J. Allyn Taylor International Prize in Medicine  
Robarts Research Institute
